PROFESSIONAL SUMMARY

Computer Science student (expected 2028) building Android, web, and AI apps. Placed **2nd of 7 teams** at the ParSU IGNITE CryptCamp Hackathon with Student Codex, an Android app I built solo. Strongest in **Kotlin, React, TypeScript, Python, and Supabase/PostgreSQL**. Seeking a **software engineering internship (OJT)** in Android, full-stack, or AI development.

PROJECTS

Student Codex – Android-First Student Workload Platform — Built Oct 2026; rebuilt Nov 2026

2nd Place of 7 teams, *ParSU IGNITE CryptCamp Hackathon (3-person team; I was the sole developer)*

- **Built solo**: Kotlin/Jetpack Compose app, Supabase/PostgreSQL backend (row-level security, **33 migrations, 4 SQL test suites**), Google Classroom sync, and a teacher dashboard.
- Made Classroom sync idempotent (Deno Edge Functions) so re-syncing never duplicates an assignment. Added fuzzy course matching and student-reported activities that publish instantly to the whole section.
- Defended the architecture to the judges in technical Q&A. Judges said it solved a problem they had faced themselves.

Specs App Store – Student Software Showcase | specs-code-canvas.vercel.app — 1 month

- Co-developed with one other developer and deployed a **live** React/TypeScript platform where the CS community showcases student-built apps. 4 projects listed; public launch to the CS community planned for late November 2026.
- Built security and authentication (Google OAuth, Cloudflare Turnstile captcha, sensitive-link blocking), plus leaderboards and user profiles on Supabase/PostgreSQL. **186 automated tests** (Vitest); deployed on Vercel.

Personal Projects (all solo)

- **JARVIS** (3 months) – Offline voice assistant (Python, Ollama, Faster-Whisper): tiered local LLMs route commands across **80+ tools** with a validation gate and spoken approval for risky actions. github.com/kirbypaladan24-lgtm/ProjectJarvis-V5
- **Mini IDE** (1.5 months) – Local AI code editor (FastAPI, React, FAISS, Ollama): codebase-aware RAG and multi-file edits reviewed by critic, security, and performance agents. github.com/kirbypaladan24-lgtm/Mini-Ide
- **Bindery** (1 day) – Web app that merges files into one PDF (Docker). github.com/kirbypaladan24-lgtm/Document-Binder
- **Roblox Games** – Designed and built **3 published games** in Roblox Studio: AfterHours (3 months), Stillwatch (1 month), StageUp (1 week, reusing AfterHours assets).

TECHNICAL SKILLS

Languages: Kotlin, TypeScript, JavaScript, Python, Java, HTML5, CSS3 (currently learning Go)
Web & Backend: React, Vite, Tailwind CSS, Node.js, Express.js, FastAPI, REST APIs
Data & Cloud: PostgreSQL, Supabase, Azure PostgreSQL, Google Cloud APIs, AWS (ECS), Google OAuth, Cloudflare Turnstile
Mobile & AI: Android Studio, Jetpack Compose, LLM integration, Ollama, RAG (FAISS)
Tools: Docker, Git, GitHub, Vercel, Render, Vitest, Roblox Studio
Familiar with: C++, Unity, Firebase, Cloud Firestore, WebSocket, PWA

WORK EXPERIENCE

Initiator, Part-Time – McDonald's — May – August 2025

- Worked frequent rush hours during local events, fiestas, and birthday parties, keeping up under high customer volume.
- Managed my time between part-time shifts and Computer Science coursework, showing up reliably for both.

EDUCATION & CERTIFICATIONS

Verify credentials: kirbypaladan24-lgtm.github.io/portfolio/

Bachelor of Science in Computer Science – Partido State University, Goa Campus — Expected 2028

Microsoft Applied Skills: Configure and Migrate to Azure Database for PostgreSQL

AWS: Amazon ECS Knowledge Badge Assessment | Fundamentals of Architecting on AWS

Google Cloud Skill Badges: The Basics of Google Cloud Compute | Build Google Cloud Infrastructure for AWS Professionals

IBM SkillsBuild: Software Engineering for Web Developers Pathway + 6 microcredentials: Front-End Web Development | Back-End Web Development | Interactive Front-End Development | Responsive Web Page Development | Integration of Database | Web Application Testing and Deployment

HarvardX: CS50's Introduction to Cybersecurity – coursework and final project completed; certificate pending

LEADERSHIP

Class President – Built an Android app that records class payments, computes totals, and tracks who has not paid.

Hackathon Team Lead (2nd of 7) – Planned the build, assigned tasks, made key decisions, and defended the project to judges.
