PROFESSIONAL SUMMARY

Computer Science student (expected 2028) building Android, web, and game projects. Placed 2nd of 7 teams at the ParSU IGNITE CryptCamp Hackathon with Student Codex, an Android app I built in two days. Hands-on with Kotlin, React and TypeScript, Supabase/PostgreSQL, and secure authentication. Seeking an internship or entry-level role.

PROJECTS

Student Codex – Android-First Student Workload Platform November 2026

2nd Place of 7 teams, ParSU IGNITE CryptCamp Hackathon (team of 3)

- Built all of the software in 2 days: Android app, Supabase/PostgreSQL database, Google Classroom sync, and teacher dashboard (teammates wrote the paper and slides).
- Students sync Google Classroom coursework in read-only form and add activities from other platforms or face-to-face classes; teachers get calendar-based workload visibility.
- Defended the architecture to the judges in technical Q&A (Classroom integration, JSON processing, PostgreSQL structure, duplicate prevention). Judges said it solved a problem they had faced themselves.

Specs App Store – Collaborative Student Software Showcase specs-code-canvas.vercel.app

- Co-developed a React/TypeScript platform where the CS community showcases student-built apps (listings, submissions, voting, comments). Built for the school's hackathon; 5 projects listed, in private use by the developers.
- Built security and authentication: Google OAuth sign-in and sign-up, Cloudflare Turnstile captcha, sensitive-link blocking, and the privacy policy.
- Implemented leaderboards, user profiles, and database integration (Supabase/PostgreSQL, Google Cloud APIs). 186 automated tests (Vitest); deployed on Vercel.

Other Projects

- **Bindery** – web system that merges uploaded files into one PDF; Docker packages its plugins and tools.
- **Roblox Games** – designed and built 3 games published on Roblox using Roblox Studio.

TECHNICAL SKILLS

Languages: Kotlin, Java, TypeScript, JavaScript, Python, C++, HTML, CSS (currently learning Go)

Web & Backend: React, Vite, Tailwind CSS, Node.js, Express.js, REST API integration, WebSocket, PWA

Databases, Cloud & Auth: PostgreSQL, Azure Database for PostgreSQL, Supabase, Firebase, Cloud Firestore, AWS, Google Cloud APIs, Google OAuth, Cloudflare Turnstile

Mobile, AI & Game: Android Studio, LLMs, AI integration, Unity, Roblox Studio

Tools: Docker, Git, GitHub, Vercel, Render, Vitest

EDUCATION & CERTIFICATIONS

Bachelor of Science in Computer Science Expected 2028

Partido State University – Goa Campus, College of Engineering and Computing

Microsoft Applied Skills: Configure and Migrate to Azure Database for PostgreSQL

IBM SkillsBuild: Front-End Web Development | Back-End Development | Interactive Front-End Development

Other: SoloLearn programming certificates; 2nd Place, ParSU IGNITE CryptCamp Hackathon

LEADERSHIP

Class President – Student leadership and coordination

- Built an Android app that records class payments, computes totals, and tracks who has and has not paid.
- Supported student coordination, communication, and activities in the Computer Science program organization.
